

101361 Dental Occlusion

[1 cr., 1, 0] Basic occlusal concepts and procedures are introduced by both laboratory and didactic components. The student is familiarized with static and dynamic occlusion, the dental articulator, and functional waxing. Diagnostic articulator mounting with an arbitrary facebow are presented. static and dynamic concepts of occlusion are applied to occlusal equilibration.

The course provides a full and comprehensive account of the fundamentals of occlusion in all its aspects, static or dynamic, normal or pathologic. It also spans the biological, biomechanical and physiological aspects of occlusion
