

403322 Information Systems Development & Strategies

[3 cr., 3, 0] The main objective of this module are to develop an awareness of the various methodologies that have evolved for Systems Development, and to draw comparisons between them. It provides practical experience of the Analysis and Design of a small system using a Structured Methodology such as SSADM, and it used to provide understanding and experience of using automated tools such as Software through Pictures (StP) to aid the systems development process. Finally it inculcates a research-based approach through the comparative method and the use of state-of-the-art study material (research papers, journals and recent publications).
